While the first “movement” of this product/culture focussed on mass production, keeping costs low and convenience, the second movement moved to centering this product in social life and is visible in early popular culture. 10. Xs come from the *Althaea officinalis* plant, which primarily grows in wet swampy areas (which explains their name). Ancient Egyptians were said to be the first to make and use the root of the plant to soothe coughs and sore throats and to heal wounds. The first Xs were prepared by boiling pieces of root pulp with honey until thick. Once thickened, the mixture was strained, cooled, then used. In the 1800s, French candy makers took the traditional root concept and whipped it with sugar and egg whites to create a fluffy, sweet candy. Candy makers eventually replaced the plant root with sugar, corn syrup, and gelatin. While the recipe has changed dramatically from the 1800s, the name remains the same. What is X
